Problem 2 (Chapter 3.4)

Which of the following multiplication tables defined on the set $\mathcal{G} = \{a, b, c, d\}$ form a group? Support your answer in each case.

(a)

0	a	b	\boldsymbol{c}	d
\boldsymbol{a}	\boldsymbol{a}	\boldsymbol{c}	d	\boldsymbol{a}
\boldsymbol{b}	\boldsymbol{b}	\boldsymbol{b}	\boldsymbol{c}	d
\boldsymbol{c}	$egin{array}{c} a \\ b \\ c \\ d \end{array}$	d	\boldsymbol{a}	\boldsymbol{b}
d	d	\boldsymbol{a}	\boldsymbol{b}	\boldsymbol{c}

(b)

0	a	\boldsymbol{b}	\boldsymbol{c}	d
\overline{a}	$egin{array}{c} a \\ b \\ c \\ d \end{array}$	\boldsymbol{b}	\boldsymbol{c}	d
\boldsymbol{b}	b	\boldsymbol{a}	d	\boldsymbol{c}
\boldsymbol{c}	c	d	\boldsymbol{a}	\boldsymbol{b}
d	d	\boldsymbol{c}	\boldsymbol{b}	\boldsymbol{a}

Problem 5 (Chapter 3.4)

Describe the symmetries of a square and prove that the set of symmetries is a group. Give a Cayley table for the symmetries. How many ways can the vertices of a square be permuted? Is each permutation necessarily a symmetry of the square? The symmetry group of the square is denoted by D_4 .

Problem 10 (Chapter 3.4)

Prove that the set of matrices of the form

$$\begin{pmatrix} 1 & x & y \\ 0 & 1 & z \\ 0 & 0 & 1 \end{pmatrix}$$

is a group under matrix multiplication. This group, known as the **Heisenberg group**, is important in quantum physics. Matrix multiplication in the Heisenberg group is defined by

$$\begin{pmatrix} 1 & x & y \\ 0 & 1 & z \\ 0 & 0 & 1 \end{pmatrix} \begin{pmatrix} 1 & x' & y' \\ 0 & 1 & z' \\ 0 & 0 & 1 \end{pmatrix} = \begin{pmatrix} 1 & x+x' & y+y'+xz' \\ 0 & 1 & z+z' \\ 0 & 0 & 1 \end{pmatrix}$$

Problem 33 (Chapter 3.4)

Let G be a group and suppose that $(ab)^2 = a^2b^2$ for all a and b in G. Prove that G is an abelian group.

Problem 48 (Chapter 3.4)

Let G be a group and $g \in G$. Show taht

$$Z(G) = \{x \in G : gx = xg \text{ for all } g \in G\}$$

is a subgroup fo G. This subgroup is called the **center** of G.

Problem 54 (Chapter 3.4)

Let H be a subgroup of G. If $g \in G$, show that $gHg^{-1} = \left\{ghg^{-1} : h \in H\right\}$ is also a subgroup of G.
